

# Let's Talk Chop.

## **Guillotine™ Cuts The Time It Takes To Do A NONSYS/ALLUSR Backup By Up To 72%.**

The secret to cutting the time it takes to do a NONSYS/ALLUSR backup is not to spend money on a faster tape drive. It's to use more of the ones you already have...more effectively.

Guillotine™ from PAE lets you do a NONSYS/ALLUSR quicker by using up to four of your existing tape drives concurrently. This chops save time by as much as 72% depending on your system. You can complete saves more often without a lot of overtime costs, and shorten your backup window. You'll keep your data more current and secure – dramatically reducing downtime losses if your system crashes.
