IBM Estimate  
78.6

Motorola has multiple AS/400's which have to be convert to RISC. They practiced converting their development system themselves. Following the Road Map's priorities, using multiple batch jobs, they took a byte out of IBM's estimate. On cut over weekend, their method would NOT have their system available for Monday morning! PC/Accelerator came to their assistance and saved them 89% on IBM & saved almost 66% on their time. Motorola called to say, " We are VERY happy with the PC/Accelerator and the Support from PAE. We could NOT have done it without PC/Accelerator and your support, thank you. " They even purchased a second copy for another RISC conversion.

You can convert the efficient way or use some other less efficient method and lose time and \$\$\$\$\$\$\$
