

PC/Accelerator Method Compared to Enhanced Upgrade Assistant (EUA)

Object Conversion Hours	
PC/Accelerator	EUA Method
2.21	5.6

The graph above displays the object translation time on a large, 4-way processor. PC/Accelerator translated 101,000 programs in 2 hours 13 minutes. Compare the amount of time it took to translate the same 101,000 programs on the same 4-way processor using IBM's Enhanced Upgrade Assistant Priority Method; 5 hours 34 minutes. IBM's method was approximately 60% slower than PC/Accelerator in this test. The comparative tests were performed at IBM in Rochester.

Would you rather spend 2.21 or 5.6 hours to do the same job? Which job costs less to perform and had less down time?
