

**Would you like to save 55 Hours going to RISC!**

Object Conversion Hours	
PC/Accelerator	ESTOBJCVN
5.01	60.28

The graph above displays the object translation time on a large, 4-way processor. PC/Accelerator translated all objects in 5 hour 2 minutes at Seaboard Corp. ESTOBJCVN calculated 60.28 hours. 55 Hours is a tremendous saving of time. Seaboard did NOT have 60 hours to do the conversion. Burlesque also stripped a library of 7,500 programs up into 11 libraries so object conversion would go faster. No method can beat PC/Accelerator, NOT even IBM's method!!

**Bob Babich said "PC/Accelerator was done before we knew it! What a surprise!"**
